Karl Bühler (1879-1963) was one of the leading theoreticians of language of the twentieth century. Although primarily a psychologist, Bühler devoted much of his attention to the study of language and language theory. His masterwork Sprachtheorie (1934) quickly gained recognition in the fields of linguistics, semiotics, the philosophy of language and the psychology of language. This new edition of the English translation of Bühler's theory begins with a survey on 'Bühler's legacy' for modern linguistics (Werner Abraham), followed by the Theory of Language, and finally with a special 'Postscript: Twenty-Five Years Later' (Achim Eschbach). Bühler's theory is divided into four parts. Part I discusses the four axioms or principles of language research, the most famous of which is the first, the organon model, the base of Bühler's instrumental view of language. Part II treats the role of indexicality in language and discusses deixis as one determinant of speech. Part III examines the symbolic field, dealing with context, onomatopoeia and the function of case. Part IV deals with the elements of language and their organization (syllabification, the definition of the word, metaphor, anaphora, etc.). The text is accompanied by an Introduction (Achim Eschbach); Translator's preface (Donald Fraser Goodwin); Glossary of terms; and a Bibliography of cited works.

Theory of Language - Karl Bühler - 2011-04-27

This volume contains selected proceedings of the conferences held at Kirchberg, August 26, 1984 and Essen, November 21-24, 1984 devoted to Karl Bühler's Theory of Language. Both conferences took place exactly fifty years after the publication of Bühler's masterpiece. However, it was felt necessary to bring renewed attention to Bühler's work in order to highlight its importance. The contributions in this volume, all in the original German language, focus on a wide range of perspectives: biographical, psychological, sociological, semiotic and linguistic.

Schriften zur Sprachtheorie - Karl Bühler - 2012

English summary: After Karl Bühler's masterpiece Sprachtheorie - Die Darstellungsfunktion der Sprache (Theory of Language - The Representational Function of Language) had finally been published in 1934, he was able to look back with some satisfaction on 25 years of constant study of the problem of language. As it is often the case with research on Bühler, sufficient attention was not paid to this casual remark he made concerning his way of thinking, it was merely his Die geistige Entwicklung des Kindes (The Mental Development of the Child), Krise der Psychologie (The Crisis of Psychology) and his Ausdruckstheorie (Theory of Expression) which apart from his Theory of Language were noticed. In order however to retrace each individual stage in Bühler's way of thinking, which is the equivalent of destroying outdated ideas in the sciences dealing with language and developing future-oriented linguistic, semiotic, philosophical models of communication science, it is essential to follow Buhler step by step. His articles on the development of the theory of language, collected in this volume, fulfill this function.

German description: Nachdem 1934 Karl Buhlers Meisterwerk, seine Sprachtheorie - Die Darstellungsfunktion der Sprache endlich mit einiger Verzögerung publiziert worden war, konnte er rückblickend mit einiger Genugtuung feststellen, dass er nun auf eine 25 Jahre andauernde Auseinandersetzung mit dem Problem der Sprache zurückblicken konnte. Wie so oft in der Buhlerforschung hat man die wie nebenbei eingestreute Bemerkung über seinen Denkweg nicht hinreichend beachtet, sondern lediglich seine Geistige Entwicklung des Kindes, die Krise der Psychologie und die Ausdruckstheorie neben seiner Sprachtheorie zur Kenntnis genommen. Um Buhlers Denkweg aber von Sprosse zu Sprosse und nicht bloss von Etage zu Etage folgen zu können, was ebenso der Destruktion überholter Denkkonzepte in den mit der Sprache befassten Wissenschaften wie dem Aufbau zukunftweisender sprachwissenschaftlich-semiotisch-philosophisch-kommunikationswiss

Semiotics - Robert E. Innis - 1985-06-22

"fifteen texts which are essential reading for anyone interested in semiotics This collection will surely become a standard text for those who teach semiotics, aesthetics or philosophy of language." -- International Philosophical Quarterly This volume presents the classic statements in semiotics and touches on a vast set of problems and themes -- philosophical, aesthetic, literary, cultural, biological, and anthropological.

Semiotics - Robert E. Innis - 1985-06-22

"fifteen texts which are essential reading for anyone interested in semiotics This collection will surely become a standard text for those who teach semiotics, aesthetics or philosophy of language." -- International Philosophical Themes -- philosophical, aesthetic, literary, cultural, biological, and anthropological.

This volume, which has partly grown from a Round Table at the XIVth International Congress of Linguists, argues for a large amount of underlying unity in outlook among different frameworks in present-day linguistics: the contemporary Prague School; the Noematic approach; the UNITY model; Integralizational Linguistics; Natural Morphology; much recent work in phonology; and Popperian Interactionism as applied, in particular, to historical linguistics. Section I discusses philosophical issues such as realism vs. cognitivism; Section II characterizes current frameworks; and Section III deals with individual linguistic areas like phonology. Leading representatives of the various approaches are shown to agree in subscribing to most if not all of nine 'Principles of New Structuralism' that combine ontological realism with non-cognitivist mentalism. These principles define a position that is structuralist in a novel sense and appears to be partly represented also in approaches such as Katzian 'Platonism' and Searle's intentionalism; it should be compatible with frameworks like GPSG. There are definite historical connections with European structuralism. The position is incompatible with current cognitivism of the 'mechanism' type but otherwise bridges traditional oppositions such as the dichotomy of generative vs. non-generative frameworks.

A History of Language Philosophies - Lia Formigari - 2004-10-28
Theory and history combine in this book to form a coherent narrative of the debates on language and languages in the Western world, from ancient classic philosophy to the present, with a final glance at on-going discussions on language as a cognitive tool, on its bodily roots and philogenetic role. An introductory chapter reviews the epistemological areas that converge into, or contribute to, language philosophy, and discusses their methods, relations, and goals. In this context, the status of language philosophy is discussed in its relation to the sciences and the arts of language. Each chapter is followed by a list of suggested readings that refer the reader to the final bibliography. About the author: Lia Formigari, Professor Emeritus at University of Rome, La Sapienza. Her publications include: Language and Experience in XVIIIth-century British Philosophy. Amsterdam & Philadelphia: J. Benjamins, 1988; Signs, Science and Politics. Philosophies of Language in Europe 1700-1830. Amsterdam & Philadelphia: J. Benjamins, 1993; La sémiotique empiriste face au kantisme. Liège: Mardaga, 1994.

The Emergence of the Modern Language Sciences - Sheila Embleton - 1999-10-15
Alongside considerable continuity, 20th-century diachronic linguistics has seen substantial shifts in outlook and procedure from the 19th-century paradigm. Our understanding of what is really new and what is recycled owes a great debt to E. F. K. Koerner's minutely researched interpretations of the work of the field's founders and key transitional figures. At the cusp of the 21st century, some of the best known scholars in the field explore how these methodological shifts have been and continue to be played out in historical Romance, Germanic and Indo-European languages, as well as in work outside these traditional areas. These 22 studies, honouring the founder of Diachronica and other publication ventures that have helped revitalize historical enquiry in recent decades, include examinations of Indo-European methodology and the reconstructions carried out by Bloomfield and Sapir; the search for relatives of Indo-European; comparative, structural and sociolinguistic analyses of the history of the Romance languages; regular vs. morpholexical approaches to OHG umlaut; and the synchrony and diachrony of gender affixes in Tsez.

Max Weber - Peter Lassman - 2017-05-15
This volume contains key writings, mainly recent, that define the current debate concerning our understanding of the nature of Max Weber's social and political thought. Topics covered include the interpretation of his central concepts; problems of method; meaning and value; liberalism; nationalism and democracy; and the fate of politics
A History of Psycholinguistics - Willem Levelt - 2013
How do we manage to speak and understand language? How do children acquire these skills and how does the brain support them? This book provides a fascinating personal history of the men and women whose intelligence, brilliant insights, fads, fallacies, cooperations, and rivalries created the discipline we call psycholinguistics.

Deictic Conceptualisation of Space, Time and Person - Friedrich Lenz - 2003-04-17
This volume is a collection of articles which present the results of investigations into the grammar, semantics and pragmatics of deictic expressions in several languages. Special emphasis is placed on contrastive studies that take cognitive and cultural context into account. Both the empirical and theoretical studies focus on the ways in which spatial, personal and textual entities are conceptualised and referred to. The cognitive approach proves to be a promising perspective combining aspects of perception, reasoning and linguistic expression to reveal what seems to be at the very heart of deictics.

Critical and Dialectical Phenomenology - Donn Welton - 1987-09-30
Critical and Dialectical Phenomenology shows how continental philosophy is currently practiced in the United States.

Routledge Dictionary of Language and Linguistics - Hadumod Bussmann - 2006-02-20
The Routledge Dictionary of Language and Linguistics is a unique reference work for students and teachers of linguistics. The highly regarded second edition of the Lexikon der Sprachwissenschaft by Hadumod Bussmann has been specifically adapted by a team of over thirty specialist linguists to form the most comprehensive and up-to-date work of its kind in the English language. In over 2,500 entries, the Dictionary provides an exhaustive survey of the key terminology and languages of more than 30 subdisciplines of linguistics. With its term-based approach and emphasis on clear analysis, it complements perfectly Routledge's established range of reference material in the field of linguistics.

Philosophy for Dummies. Many modern historians and thinkers describe western history as a progressive meaning. A hidden presence: verbal magic; Playing with language: joke and metaphor; Metaphor: a research instrument; Dynamics of poetic language; Semantic structure of poetic language; Semantic structure of punctuation marks; Why gestures?; Between acts and words; Language within language: dynamics, change and evolution.

The Correspondence of Walter Benjamin and Gershom Scholem, 1932-1940 - Walter Benjamin - 1992
The legendary correspondence between the critic Walter Benjamin and the historian Gershom Scholem bears indispensable witness to the inner lives of two remarkable and enigmatic personalities. Benjamin, acknowledged today as one of the leading literary and social critics of his day, was known during his lifetime by only a small circle of his friends and intellectual confreres. Scholem recognized the genius of his friend and mentor during their student days in Berlin, and the two began to correspond after Scholem’s emigration to Palestine. Their impassioned exchange draws the reader into the very heart of their complex relationship during the anguished years from 1932 until Benjamin’s death in 1940.

Information, Organisation and Technology - nethe International Workshop on Organisational Semiotics 1999 Almelo - 2001-01-31
The semiotic perspective accommodates the individual and the social, the human and the technical, intra- and inter-organizational interactions, at a level of detail that is required in the study, modelling, design, and engineering of new and alternative organizational and technical systems. This perspective is outlined in the chapter presentations in this work.

My Daily Constitution - Richard J. Rolwing - 2001-02-02
Subtitled: A NATURAL LAW PERSPECTIVE, 365 essays, each 365 words, on Uncle Sam’s birthright, genealogy, and orientation, OR the Constitution’s philosophical and historical presuppositions and implications, OR Philosophy for Dummies. Many modern historians and thinkers describe western history as a progressive movement toward freedom—freedom from religious and rational morality. For them Uncle Sam rides the current crest of this wave. The American government is said to be agnostic about religion and indifferent about philosophy. There is no universal anthropology behind political judgements, no rational psychology behind political institutions, no history behind arguments, no epistemology behind communications, no metaphysics behind American independence, no ethics behind our Constitution, no moral authority behind our laws, and no logic behind their interpretation. In fact, there are no bonds to anything past, especially since there are no foundations either temporal or ontological for any convictions whatsoever. This view grossly distorts Uncle Sam’s basic orientation, and the distortion is really an attempted abortion, because many moderns have a phobia about that orientation, which is Natural Law.

What is Knowledge? - Jose Ortega y Gasset - 2002-01-01
Appearing in English for the first time, this book comprises two of Ortega’s most important works, ¿Qué es conocimiento? and the essay “Ideas y creencias.” This is Ortega’s attempt to systematically present the foundations of his metaphysics of human life and, on that basis, to provide a radical philosophical account of knowledge. In so doing, he criticizes idealism and overcomes it. Accordingly, this book goes well beyond a treatise on epistemology; in fact, as understood in modern philosophy, this discipline and its questions are shown to be derivative and, in that sense, they are transcended here by Ortega’s systematic effort. Written during the time of his maturity, these works are representative of his fruitful and radical period. Both ¿Qué es conocimiento? and “Ideas y creencias” are equally decisive not only for the understanding and radical completion of Ortega’s work, but also for their relevance to the work of continental philosophers during the same period and for years to come (e.g., Husserl, Jaspers, Heidegger, Sartre, and others).

Humor and Comedy in Puppetry - Dina Sherzer - 1987
This volume is about puppetry, an expression of popular and folk culture which is extremely widespread around the world and yet has attracted relatively little scholarly attention. Puppetry, which is intended for audiences of adults as well as children, is a form of communication and entertainment and an esthetic and artistic creation. Of the many aspects of puppetry worthy of scholarly study, this book’s focus is on a central and dominant feature—humor and comedy.
Perspective and Perspectivation in Discourse - Carl Friedrich Graumann - 2002-11-18

'Perspective' and 'viewpoint' are widely used in everyday talk as well as in the specialist languages of the social, cognitive, and literary sciences. Taken from the field of visual perception and representation, these concepts have acquired a general meaning and significance, as characteristics of human cognitive processing. Since, however, this field is shared by an increasing body of disciplines, perspective terms have also acquired specific and technical meanings. A striking example is the newly introduced use of 'perspectivation' in discourse analysis. This volume on 'perspective and perspectivation' — the first of its kind — will help to fill the gap between the common understanding of perspective and the specifics of its structure and dynamics as they have been elaborated in the human sciences, mainly in psychology and linguistics. The focus is on the structure of perspectivity in cognition and language, and the dynamics of setting and taking perspectives in social interaction and in the construction and understanding of texts. Both topics are presented here in an interdisciplinary way by a group of linguists and psychologists.

The English Pragmatics Association (IPrA) Handbook of Pragmatics - Jef Verschueren - 1999-05

This encyclopaedia of one of the major fields of language studies is a continuously updated source of state-of-the-art information for anyone interested in language use. The IPrA Handbook of Pragmatics provides easy access — for scholars with widely divergent backgrounds but with convergent interests in the use and functioning of language — to the different topics, traditions and methods which together make up the field of Pragmatics. The Handbook of Pragmatics covers the most recent developments in the field, including advances in the cognitive, social and cultural study of language and communication, i.e. the science of language use. The Handbook of Pragmatics is a unique reference work for researchers, which has been expanded and updated continuously with annual installments since 1995. It is also available online.

Perspective and Perspectivation in Discourse - Carl Friedrich Graumann - 2002-11-18

'Perspective' and 'viewpoint' are widely used in everyday talk as well as in the specialist languages of the social, cognitive, and literary sciences. The focus is on the structure of perspectivity in cognition and language, and the dynamics of setting and taking perspectives in social interaction and in the construction and understanding of texts. Both topics are presented here in an interdisciplinary way by a group of linguists and psychologists.

The Language of Gestures - Wilhelm Wundt - 1973-01-01

This volume is about puppetry, an expression of popular and folk culture which is extremely widespread around the world and yet has attracted relatively little scholarly attention. Puppetry, which is intended for audiences of adults as well as children, is a form of communication and entertainment and an esthetic and artistic creation. Of the many aspects of puppetry worthy of scholarly study, this book's focus is on a central and dominant feature—humor and comedy.

Philosophy and Science in Phenomenological Perspective - Kah Kyung Cho - 1984-10-31

The articles included in this volume originate from contributions to the International Conference on Philosophy and Science in Phenomenological Perspective, held in Buffalo in March 1982. The occasion had been to honor the late Professor Marvin Farber, a long time distinguished member of the Department of Philosophy, State University of New York at Buffalo, and the Founding Editor of the journal, Philosophy and Phenomenological Research. Many of the papers were subsequently rewritten, expanded or otherwise edited to be published in the series Phenomenologica. The articles by Professor Frings and Professor Rotenstreich had not been presented at the conference, although they were originally invited papers. We regret that not all papers submitted to the conference, including some of our friends, could be accommodated in this volume. Nonetheless, our sincere gratitude is due to all participants who have made the conference a memorable and worthy event. Of Philosophy, State University of New York at The DepartmeBuffalo, as the sponsor of the conference, wishes to acknowledge the grants from the Conferences in the Disciplines Program, Conversations in the Disciplines Program, and the International Studies of the State University of New York at Buffalo, as well as for a grant from the National Endowment for the Humanities. The International Phenomenological Society, with Professor Roderick Chisholm succeeding Marvin Farber as its president, co-sponsored the conference.

Encyclopedia of Linguistics - Philipp Straszyn - 2013-02-01

Utilizing a historical and international approach, this valuable two-volume resource makes even the more complex linguistic issues understandable for the non-specialized reader. Containing over 500 alphabetically arranged entries and an expansive glossary by a team of international scholars, the Encyclopedia of Linguistics explores the varied perspectives, figures, and methodologies that make up the field.

thinking in psychological science - jaan valsiner - 2011-12-31

on a theory of reference which is intrinsically cognitive. as a contribution to contemporary research, the reading presents a core of theories developed in central europe between the late nineteenth and early twentieth centuries by philosophers, physicists, psychologists and semioticians who shared a dynamic approach and a pronounced concern with problems of interaction and dependence. these theories offer innovative solutions to some of the epistemological and philosophical problems currently at the centre of debate, as part whole, theory of relations, and conceptual and linguistic categorization.

the dawn of cognitive science - l. albertazzi - 2013-04-17

current debate in cognitive science, from robotics to analysis of vision, deals with problems like the perception of form, the structure and formation of mental images and their modelling, the ecological development of artificial intelligence, and cognitive analysis of natural language. it focuses in particular on the presence of a hierarchy of intentional explanations in different formats of representation. these diverse approaches, which share a common assumption of the inner nature of representation, call for a new epistemology - even a new psychophysics - based on a theory of reference which is intrinsically cognitive. as a contribution to contemporary research, the reading presents the core of theories developed in central europe between the late nineteenth and early twentieth centuries by philosophers, physicists, psychologists and semioticians who shared a dynamic approach and a pronounced concern with problems of interaction and dependence. these theories offer innovative solutions to some of the epistemological and philosophical problems currently at the centre of debate, as part whole, theory of relations, and conceptual and linguistic categorization.

language, action and context - brigitte nerlich - 1996-06-28

the roots of pragmatics reach back to antiquity, especially to rhetoric as one of the three liberal arts. however, until the end of the 18th century proto-pragmatic insights tended to be consigned to the pragmatic, that is rhetoric, wastepaper basket and thus excluded from serious philosophical consideration. it can be said that pragmatics was conceived between 1780 and 1830 in britain, but also in germany and in france in post-lockian and post-kantian philosophies of language. these early 'conceptions' of pragmatics are described in the first part of the book. the second part of the book looks at pragmatic insights made between 1830 and 1880, when they were once more relegated to the philosophical and linguistic underground. the main stage was then occupied by a fact-hunting historical comparative linguistics on the one hand and a newly spiritualised philosophy on the other. in the last part the period between 1880 and 1930 is presented, when pragmatic insights flourished and were sought after systematically. this was due in part to a new upsurge in empiricism, positivism and later behaviourism in philosophy, linguistics and psychology. between 1780 and 1930 philosophers, psychologists, sociologists and linguists came to see that language could only be studied in the context of dialogue, in the context of human life and finally as being a kind of human action itself.

the evolution of human language - wolfgang wildgen - 2004-06-30

wolfgang wildgen presents three perspectives on the evolution of language as a key element in the evolution of mankind in terms of the development of human symbol use. (1) he approaches this question by constructing possible scenarios in which mechanisms necessary for symbolic behavior could have developed, on the basis of the state of the art in evolutionary anthropology and genetics. (2) non-linguistic symbolic behavior such as cave art is investigated as an important clue to the developmental background to the origin of language. creativity and innovation and a population's ability to integrate individual experiments are considered with regard to historical examples of symbolic creativity in the visual arts and natural sciences. (3) probable linguistic 'fossils' of such linguistic innovations are examined. the results of this study allow for new proposals for a 'protolanguage' and for a theory of language within a broader philosophical and semiotic framework, and raises interesting questions as to human consciousness, universal grammar, and linguistic methodology. (series b)
